

JDV LEVEL LODOR™

Solids Handling Products

Product Overview

The **JDV LEVEL LODOR™** provides Water Quality professionals with a better means to dispose of processed waste and material with increased odor control and reduced risk of operator personnel being unnecessarily exposed to processed material.

The **JDV LEVEL LODOR** helps contain the odors that otherwise could saturate the surrounding environment by covering standard dumpsters used for hauling processed material with a patented design. The patented design allows for even distribution of material which increases the fill percent of the dumpster without the need for personnel to manually even out the waste material and expose themselves to potentially hazardous material. Odor build up within the dumpster may also be relieved by utilizing the vent pipe attachment option, which can be connected to an air/odor filtration or exchange system.

Enclosing dumpsters with the **JDV LEVEL LODOR** allows for outdoor installation with enhanced pest control measures and without exposing material to the environment. The ability to install the system outdoors frees critical or limited indoor square footage for other needs and may allow for a decrease in capital expenses for design, engineering and installation for new construction/upgrade projects.

Features	Benefits
Patented Design for Auto Leveling of Material Without Operator Intervention.	Increased Fill% for Improved Operational Efficiencies and Personnel Safety
Auto Level Sensor to Shutdown Operation and to Auto Notify Personnel	Increased Operational Efficiency of the Facility
Completely Covers Standard 20, 30 and 40 yard Dumpsters	Reduced Odors, Pest Control and Increased Personnel Safety During Operation.
Outdoor Installation - Increases Available Indoor Square Footage for Other Uses and/or Eliminates Need for Buildings for Odor/Weather Protection.	Increased Return on Invested Capital and/or Lower Initial Capital Costs.
Replaceable Ultra High Molecular Weight (UHMW) Liners to reduce screw wear	Reduced Maintenance Costs, Lower Total Cost of Ownership
Shaftless Screw Design	Proven Design for Transporting Processed Waste Materials

Options & Accessories

- Available for standard 20, 30 or 40 yard dumpsters.
- Integral vent pipe attachment for connection to air filtration/exchange system.
- Integral Control Panel for interconnection with facility control systems.

Pricing

Pricing varies depending on the size of the dumpster to be covered and material. Please contact your local JDV Sales Representative or contact JDV, 973-366-6556. Quotations are provided within 48 hours of request when accompanied by minimum required specification data.

Minimum specification data required in order to provide a quote:

1. Required Capacity (ft³/Hr)
2. Location of the installation (Indoors, Outdoors, Building type, etc)
3. Material Conveyed (Sludge, Grit, Screenings or Other)
4. Dumpster size (20, 30 or 40 yard)
